

INTEGRATION OPTIONS

There are two ways to integrate with Alvarado's intelligent admission devices:

USING ALVARADO'S GATELINK10

Alvarado's robust GateLink10 access control software serves as the admission platform for professional and collegiate sports teams, zoos, waterparks, ferry operators and theme parks. Installed in hundreds of locations worldwide, GateLink10 is a very powerful and highly flexible application. Integrated in real-time with dozens of ticketing providers, users benefit from ongoing feedback and product enhancements driven by our large installation base.

USING ALVARADO'S DIRECTCONNECT API

Our DirectConnect API allows third party system providers to communicate directly with our intelligent turnstiles, pedestals, wall-mounted scanners and mobile validation terminals. The API provides a clear, easily implemented command structure that allows the validation of any type of media and enables printing of seat locator slips, receipts or coupons during the entry process.

Note: Example code in both Java and C# is available.
